```
> Entering new AgentExecutor chain...
```

```
Thought: To find out the number of columns in the dataframe, I can use the '.shape' attribute of the dataframe, which returns a tuple where the first elem
```

```
Action: python_repl_ast
```

```
Action Input: df.shape[1]0I now know the final answer
```

```
Final Answer: There are 8 columns in the dataframe.
```

```
> Finished chain.
```

```
Process finished with exit code 0
```
